

ATTA AHMED

Software Engineer | Python, Backend Development & REST APIs

Cairo, Egypt | +20 111 213 6852 | ataahmad17122000@gmail.com

linkedin.com/in/atta-ahmed-9966a3403 | github.com/AttaAhmedDev

PROFILE

Software Engineer with hands-on experience building backend systems and REST APIs in Python (Flask/Django), with additional full-stack delivery experience across React front ends. Strong focus on clean architecture, test coverage, and code quality — comfortable working within structured development processes and collaborating with senior engineers on debugging, code review, and iterative delivery. Experience spans database design, authentication/authorization systems, and end-to-end feature ownership from a multi-tenant SaaS dashboard to an educational platform.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, PHP, SQL

Backend Development: Flask, Django, REST APIs, JWT Authentication, Role-Based Access Control (RBAC), SQLAlchemy, ORM, CRUD Operations, MVC, MVT

Core Concepts: Object-Oriented Programming (OOP), Software Development Life Cycle (SDLC), Unit Testing (pytest/unittest), Authentication & Authorization, API Integration, State Management, Component-Based Architecture

Databases: PostgreSQL, MySQL, Database Design, Query Optimization

Frontend Development: React, Vite, React Router, JavaScript (ES6+), HTML5, CSS3, Bootstrap, Chart.js / react-chartjs-2, Responsive Design

Tools & Technologies: Git, GitHub Actions, npm, Agile, Postman, Railway, Gunicorn, Linux

EXPERIENCE

Full-Stack Developer — Freelance Client, Cairo, Egypt

May 2026 – June 2026

- Designed and built the backend for “FlowDesk,” a multi-tenant SaaS analytics dashboard, using Flask and PostgreSQL, with JWT authentication and RBAC-driven authorization across 20+ REST endpoints for 7 user roles.
- Built the React (Vite) single-page front end consuming that API, using React Router for protected, role-based navigation, token storage, and auth guards across all 7 roles.
- Modeled the PostgreSQL schema and built reusable React components (tables, forms, modals) within a clean, component-based structure spanning api, auth, components, and pages modules.
- Built dashboards visualizing real-time revenue, order statistics, and team activity with react-chartjs-2, styled with custom responsive CSS.
- Deployed the full stack to Railway; validated frontend-backend integration against all endpoints with Postman.

Full-Stack Developer — Freelance Client, Beirut, Lebanon

October 2025 – December 2025

- Designed and built the PHP JSON API and React (Vite) front end for an English/Math learning platform, collaborating remotely with an international client (Beirut, Lebanon) through requirements, delivery, and deployment
- Built an admin dashboard in React for managing worksheets, presentations, games, and flashcards, including secure content uploads.
- Built CRUD REST endpoints for auth, worksheets, presentations, and games to power dynamic course and content pages.
- Developed responsive interfaces optimized for desktop and mobile, collaborating directly with the client on requirements.

Backend Developer Intern — x. ware

June 2022 – August 2022

- Worked under senior engineer supervision developing and maintaining backend services in Python, designing and optimizing RESTful APIs for web applications.
- Wrote and optimized SQL queries against relational databases and enforced CRUD operations integrated with frontend applications.
- Collaborated with senior developers in an Agile environment; participated in code reviews, debugging, and testing to improve application quality.
- Used Git and GitHub for version control in a collaborative development workflow.

Front-End Developer Intern — Information Technology Institute (ITI), Assiut, Egypt *June 2021 – August 2021*

- Completed intensive hands-on training in modern front-end web development practices.
- Built responsive web pages and interfaces using HTML, CSS, and JavaScript.
- Applied object-oriented programming, Git version control, and collaborative workflows across the software development life cycle (SDLC).

PROJECTS

E-Commerce Backend — Django REST Framework

GitHub: <https://github.com/AttaAhmedDev/E-commerce>

- Building a production-grade Django REST Framework e-commerce backend, developing each feature through a structured 13-step methodology for consistency and full test coverage.
- Implemented JWT authentication with token blacklisting (SimpleJWT) and profile/password management flows, with auto-generated API docs via drf-spectacular.
- Testing with pytest-django and factory-boy, with django-filter for advanced query filtering; all tests passing through the completed features.
- Currently building out the product catalog (Category/Brand models) as the next feature.

FlowDesk — Full-Stack (Flask + React) Multi-Tenant SaaS Dashboard

GitHub: <https://github.com/AttaAhmedDev/saas-dashboard>

- Designed and built a Flask + PostgreSQL JWT API across 20+ endpoints, plus the entire front end in React (Vite) with React Router.
- Implemented role-aware UI rendering for seven RBAC roles, showing and hiding views and actions based on permissions returned by the API.
- Visualized revenue, orders, and team analytics with react-chartjs-2 inside a reusable, component-based dashboard architecture.

Online Learning Platform — Full-Stack (PHP + React)

GitHub: https://github.com/AttaAhmedDev/albushraedu_website | Live : <https://albushraedu.com>

- Designed and built the PHP JSON API and React (Vite) single-page front end for an English/Math kindergarten learning platform, served over same-origin routing (/api/* → PHP, everything else → the SPA).
- Developed an admin dashboard in React for managing worksheets, presentations, games, and flashcards, including secure content uploads.
- Built CRUD REST endpoints (auth, worksheets, presentations, games, flashcards) to power dynamic, data-driven course and content pages.
- Built fully responsive layouts for desktop and mobile, matching the production site currently live at albushraedu.com.

Movie App — React Movie Browser (TMDB API)

GitHub: <https://github.com/AttaAhmedDev/movie-app>

- Built a React movie browser consuming The Movie Database (TMDB) REST API, with routing for browsing, search, and detail views.
- Implemented title search and a favorites list, letting users save and revisit movies across sessions.
- Built detailed movie pages displaying cast information and trailers, with a responsive, component-based UI.

EDUCATION

Bachelor of Information Systems — Assiut University, Assiut, Egypt

April 2019 – April 2023

GPA: 3.41

CERTIFICATIONS & COURSES

- Django Application Development with SQL and Databases — IBM
- Developing AI Applications with Python and Flask — IBM
- JavaScript — Mahara-Tech
- Web Development — Information Technology Institute, ITI

LANGUAGES

English — Upper-Intermediate
