

ATTA AHMED

Software Engineer | Full-Stack & Backend Development | Python, TypeScript, React, REST APIs

Cairo, Egypt | +20 111 213 6852 | ataahmad17122000@gmail.com
linkedin.com/in/atta-ahmed-9966a3403 | github.com/AttaAhmedDev

PROFILE

Software Engineer with hands-on experience shipping production backend systems and full-stack features in Python (Flask/Django), JavaScript/TypeScript, and React. Builder who owns work end to end, from database design and REST APIs with JWT authentication and role-based access control to background job queues and live deployments, for remote and international clients. Focused on getting working features in front of real users quickly and refining them, with strong attention to clean architecture, test coverage, and code quality. Comfortable working autonomously, learning new stacks fast, and collaborating with senior engineers on debugging, code review, and iterative delivery.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript (ES6+), TypeScript, PHP, SQL

Backend Development: Django, Django REST Framework, Flask, REST APIs, API Integration, JWT Authentication, Role-Based Access Control (RBAC), SQLAlchemy, ORM, CRUD Operations, MVC, MVT

Databases & Queues: PostgreSQL, MySQL, Redis, RabbitMQ, Celery, Database Design, Query Optimization, Background Jobs, Asynchronous Task Queues

Frontend Development: React, Vite, React Router, HTML5, CSS3, Bootstrap, Chart.js / react-chartjs-2, State Management, Component-Based Architecture, Responsive Design

Testing & Quality: Unit Testing, pytest, pytest-django, factory-boy, unittest, OpenAPI (drf-spectacular), Code Review, Object-Oriented Programming (OOP)

Tools & DevOps: Git, GitHub Actions, Docker, Docker Compose, Kubernetes, Railway, Cloudflare, Vercel, Unicorn, Linux, npm, Postman, Agile, Software Development Life Cycle (SDLC)

EXPERIENCE

Full-Stack Developer — Freelance Client, COREXION

August 2026 – Present

- Built and shipped the production Django marketing site at corexion.uk end to end, with server-rendered pages, clean URLs, and PostgreSQL-backed copy and photos.
- Implemented a private CMS so editors can update page sections without changing templates, with image uploads to object storage.
- Added a rate-limited read API, automated tests for content and cleanup, and deployed the stack live on Railway with Cloudflare.

Full-Stack Engineer Intern — Nilecode, El Maadi, Cairo, Egypt

July 2026 – September 2026

- Worked on a full-stack e-commerce platform built with React and Django, building reusable frontend components and integrating REST APIs.
- Developed backend features for order management and inventory on the platform.
- Worked with PostgreSQL, Docker, and Railway during deployment and maintenance.

Full-Stack Developer — Freelance Client, Cairo, Egypt

May 2026 – June 2026

- Designed and built the backend for “FlowDesk,” a multi-tenant SaaS analytics dashboard, using Flask and PostgreSQL, with JWT authentication and RBAC-driven authorization across 20+ REST endpoints for 7 user roles.
- Built the React (Vite) single-page front end consuming that API, using React Router for protected, role-based navigation, token storage, and auth guards across all 7 roles.
- Modeled the PostgreSQL schema and built reusable React components (tables, forms, modals) within a clean, component-based structure spanning api, auth, components, and pages modules.
- Built dashboards visualizing revenue, order statistics, and team activity with react-chartjs-2, and deployed the full stack to Railway.

Full-Stack Developer — Freelance Client, Beirut, Lebanon

October 2025 – December 2025

- Designed and built the PHP JSON API and React (Vite) front end for an English/Math learning platform, collaborating remotely with an international client through requirements, delivery, and deployment.
- Built an admin dashboard in React for worksheets, presentations, games, and flashcards, including secure content uploads.
- Built CRUD REST endpoints for auth, worksheets, presentations, and games, plus responsive desktop and mobile interfaces.

Backend Developer Intern — x. ware

June 2022 – August 2022

- Developed and maintained backend services in Python under senior engineer supervision, designing and optimizing RESTful APIs for web applications.
- Wrote and optimized SQL queries against relational databases and implemented CRUD operations integrated with front-end applications.
- Collaborated with senior developers in an Agile environment; participated in code reviews, debugging, and testing. Used Git and GitHub for version control.

Front-End Developer Intern — Information Technology Institute (ITI), Assiut, Egypt

June 2021 – August 2021

- Completed intensive hands-on training in modern front-end web development practices.
- Built responsive web pages and interfaces using HTML, CSS, and JavaScript.
- Applied object-oriented programming, Git version control, and collaborative workflows across the software development life cycle (SDLC).

PROJECTS

COREXION — Django Marketing Site & CMS

GitHub: <https://github.com/AttaAhmedDev/COREXION> | Live: <https://corexion.uk>

- Built a production Django site with server-rendered pages, clean URLs, and a PostgreSQL CMS for headings, copy, and photos.
- Implemented image cleanup, a rate-limited read API, automated tests, and Railway + Cloudflare deployment.

Task Queues — Django + Celery Background Jobs

GitHub: <https://github.com/AttaAhmedDev/Task-Queues>

- Built a Django movie queue where submitting a title enqueues a Celery job; a worker fills in details asynchronously from a local list.
- Used RabbitMQ as the broker and Redis as the result backend, with Docker Compose running web, worker, broker, and Redis together.

E-Commerce Backend — Django REST Framework

GitHub: <https://github.com/AttaAhmedDev/E-commerce>

- Building a production-grade Django REST Framework e-commerce backend on PostgreSQL feature by feature through a structured 13-step development process, with each feature fully tested before moving on.
- Implemented JWT authentication with token blacklisting (SimpleJWT) and profile and password management flows; currently building the product catalog (category and brand models).
- Set up auto-generated OpenAPI docs with drf-spectacular, django-filter, and pytest-django + factory-boy test coverage with all tests passing.

FlowDesk — Full-Stack (Flask + React) Multi-Tenant SaaS Dashboard

GitHub: <https://github.com/AttaAhmedDev/saas-dashboard> | Live demo: <https://saas-dashboard-atta14.vercel.app>

- Designed and built a Flask + PostgreSQL JWT API across 20+ endpoints, plus the entire front end in React (Vite) with React Router.
- Implemented role-aware UI rendering for seven RBAC roles and visualized revenue, orders, and team analytics with react-chartjs-2.

Online Learning Platform — Full-Stack (PHP + React)

GitHub: https://github.com/AttaAhmedDev/albushraedu_website | Live: <https://albushraedu.com>

- Designed and built the PHP JSON API and React (Vite) front end for an English/Math learning platform, with an admin dashboard for worksheets, presentations, games, and flashcards.
- Built fully responsive layouts for desktop and mobile, matching the production site live at albushraedu.com.

Movie App — React Movie Browser (TMDB API)

GitHub: <https://github.com/AttaAhmedDev/movie-app> | Live demo: <https://movie-app-atta14.vercel.app>

- Built a React movie browser consuming The Movie Database (TMDB) REST API, with search, favorites, and detail pages for cast and trailers.

EDUCATION

Bachelor of Information Systems — Assiut University, Assiut, Egypt

April 2019 – April 2023

GPA: 3.41

CERTIFICATIONS & COURSES

- Django Application Development with SQL and Databases — IBM
- Developing AI Applications with Python and Flask — IBM
- Introduction to Containers w/ Docker, Kubernetes & OpenShift — IBM

- Introduction to Information Technology and AWS Cloud — Amazon Web Services (AWS)
- JavaScript — Mahara-Tech
- Web Development — Information Technology Institute, ITI

LANGUAGES

English — Upper-Intermediate
